Harrison Pielke-Lombardo

Senior Backend & Full-Stack Software Engineer

Denver, CO (remote or hybrid) | 720-209-6249 | pielkekid@gmail.com | linkedin.com/in/harrison-p-l | github.com/harrison-p-l

SUMMARY

Senior software engineer with 10 years of experience building production backend systems, data pipelines, and web and mobile applications in Python, Clojure, TypeScript, and Java. Core engineer on a 4-6 person team at a B2B SaaS logistics startup, building the pipeline that processed 1M+ documents per month and helping grow the product from zero to $2.1M ARR through acquisition. Now building Well Met, a web and mobile dating app, solo with AI coding agents. Owns features end to end and has mentored, interviewed, and led client calls.

SKILLS

Languages: Python, Clojure, ClojureScript, TypeScript, Java, JavaScript, SQL, Bash

Backend: REST APIs, GraphQL, data pipelines, rules engines, event-driven architecture, database migrations

Frontend & Mobile: TypeScript, ClojureScript, React (Reagent / re-frame), React Native (Expo), JavaScript, WebSockets

Data: PostgreSQL, Datomic, DynamoDB, Redis, SQL, knowledge graphs (RDF)

Cloud & DevOps: AWS (Lambda, ECS, EC2, SQS, SNS, RDS, DynamoDB, CloudFront), Terraform, Docker, GitHub Actions, CI/CD

AI & ML: LLM integration, PyTorch, NLP, agentic development with Claude Code

EXPERIENCE

Founder & Software Engineer | Aug 2026 - Present

Well Met (pre-launch dating app, getwellmet.app), Denver, CO

- Building a web, iOS, and Android dating app centered on structured, mutual-consent post-date reviews.
- Architected a Clojure backend on PostgreSQL with real-time WebSocket updates, and one shared ClojureScript / re-frame core for the web app, admin tool, and React Native (Expo) mobile app.
- Implemented ID verification (Persona), geohash-only location storage, and audit-logged photo and video moderation.
- Led development with AI coding agents (Claude Code) under written architecture guardrails and review, merging 450+ pull requests in two months with Playwright, unit, and CI test suites.
- Wrote the AWS deployment (ECS Fargate, ALB with WAF, RDS, GuardDuty) as Terraform with GitHub Actions deploy workflows.

Senior Software Engineer | Sep 2022 - Mar 2026

Peruse Technology Inc. (acquired), Remote

- Helped scale a B2B SaaS logistics platform from zero to $2.1M ARR and 70+ customers on a 4-6 person team through acquisition.
- Designed and built the core load processing pipeline and rules engine in Clojure and Python, handling 1M+ documents per month via REST and GraphQL.
- Trained and deployed LLM-based models in PyTorch to automate document processing and freight broker verification, replacing work that took customers entire back-office audit teams.
- Led a zero-downtime migration of the production database from Datomic to PostgreSQL as it neared Datomic's size limits.
- Shared ownership of event-driven AWS infrastructure as code in Terraform (Lambda, ECS, SQS, SNS, RDS); took on-call rotations and contributed to the TypeScript frontend.
- Owned features end to end with the product team; mentored an engineer, interviewed candidates, reviewed code, and owned several client relationships as technical contact.

Research Software Engineer (Graduate Researcher) | Aug 2016 - Aug 2022

University of Colorado Anschutz Medical Campus, Aurora, CO

- Led software for research projects across 4+ teams, shipping 5 open-source packages, 4 datasets, and 6 publications.
- Built Knowtator, a Java and ClojureScript / re-frame annotation web app (rewritten from Java Swing), used for 100k+ annotations by clinicians and researchers.

EDUCATION, OPEN SOURCE & SPEAKING

M.S., Computational Bioscience, University of Colorado Anschutz Medical Campus | 2022

B.S., Applied Mathematics (minors: Computer Science, Biochemistry), University of Colorado Boulder | 2016

Open source & speaking: author of datascript-shortest-path; contributor to day8/re-frame-undo; invited talk on AI in transportation, IDEAL institute, Chicago, 2024
